

# XS™

## Instruction Manual

## Package Contents

- XS™ e-Rig
- Quartz e-Chamber™
- Glass Attachment
- Glass Carb Cap
- Seal/Tether
- Loading Tool
- USB-C Charging Cable
- Glass Filling Funnel
- 3x Prepackaged Iso-Snaps™

## How to Use

### On/Off

- Press the power button 5 times to turn On/Off.

### Temperature

#### Changing the Settings:

- Press the button three times to adjust the temperature setting.

You can modify the temperature setting during a heating cycle by pressing the power button three times.

#### Heating Cycle:

- Press and hold the button for 3 seconds to start a heating cycle.

Press the button anytime during the heating cycle to stop the heating.

#### Temperature Settings:

SETTING	TEMP °F
Purple	475°
Blue	525°
Cyan	575°
Green	625°

### Set up

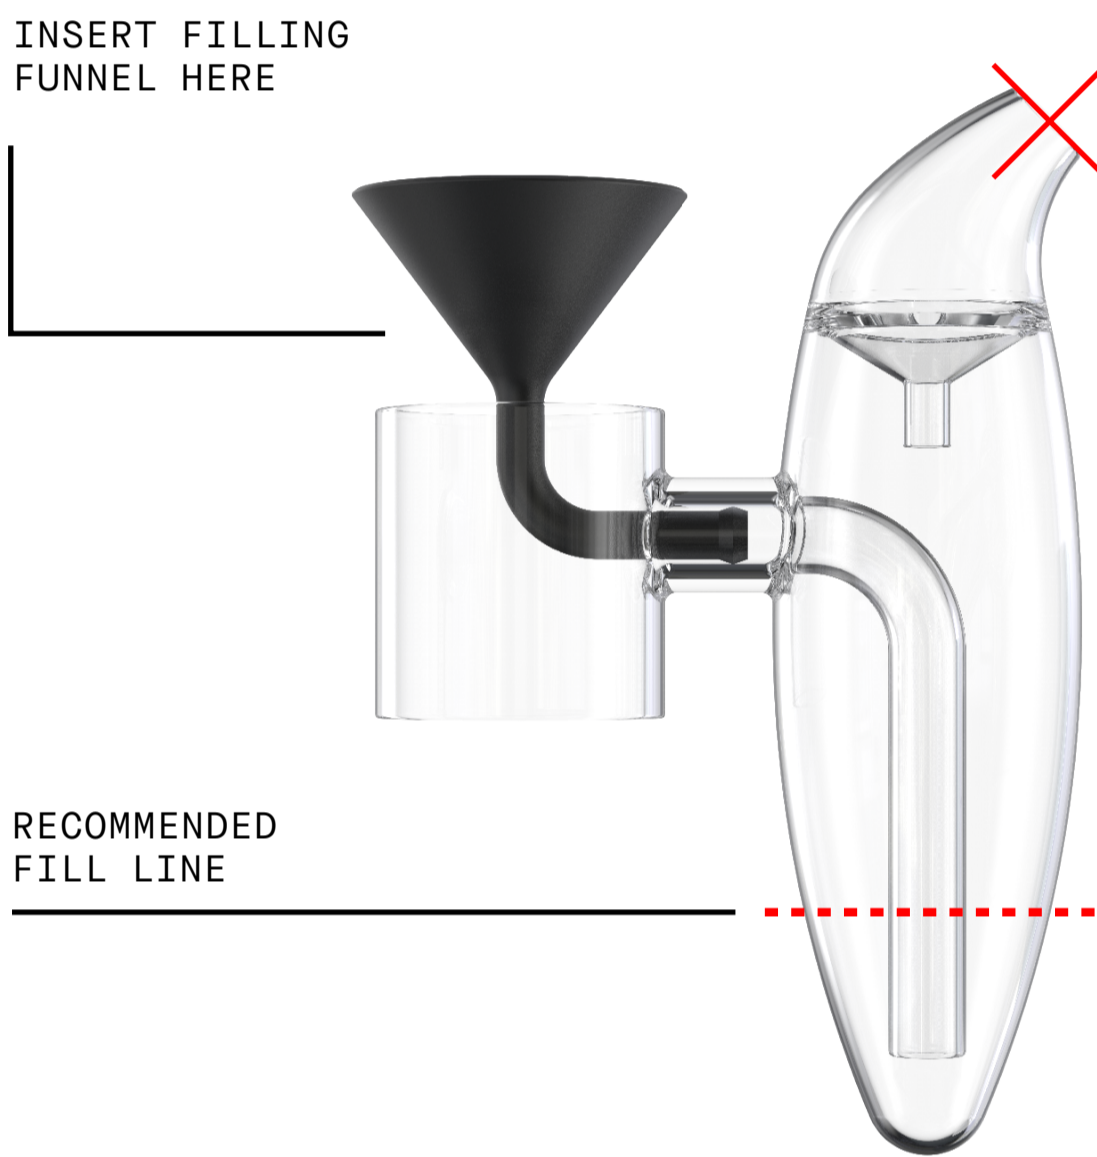

- Unpack the XS™ kit by removing all components, including those in the Accessory Kit.

- Add water to the Glass Attachment using the Glass Filling Funnel by inserting the small end of the funnel into the glass piping of the Glass Attachment.

- It is recommended to add 30 mm or 1.25 inches of water to the Glass Attachment.

**DO NOT FILL FROM MOUTHPIECE**

- Assemble the XS™ by threading the e-Chamber™ into the e-Rig, placing the pre-filled Glass Attachment on the e-Rig, and placing the Glass Carb Cap with the Seal/Tether on the Glass Attachment.

## Operating

- Standard operation of the XS™ includes turning the unit on and setting the desired temperature setting prior to starting a heating cycle.

- It is recommended that the XS™ be cold-loaded with concentrate equivalent in size to 1-2 rice grains.

- When ready, start a heating cycle with the Glass Carb Cap locked down. The LED will illuminate Red to indicate heating, and Green when the device is ready.

- The XS™ includes an Auto Pre-Heat feature, where the XS™ detects when the e-Chamber™ is cold and will provide a longer heating time to improve vapor production.

- It is recommended to take slow, smooth draws for the best vapor production. Strong inhalation may result in splashing of concentrate outside of the e-Chamber™ and poor vapor production.

- At the end of a heating cycle, clear the vapor by unlocking the Glass Carb Cap during final inhalation.

### Charging

- The battery status is indicated by the number of LED lights illuminated underneath the button.

- The XS™ can be charged with the included USB-C Cable and an appropriate power adapter.

### Cleaning

- The XS™ e-Rig should only be cleaned with 70% isopropyl alcohol. The e-Chamber™, Glass Attachment, and Glass Carb Cap can be cleaned with 91% isopropyl alcohol.

- It is recommended to use an Iso-Snap™ after each session to increase the lifespan, and overall flavor and vapor production from the Quartz Cup.

- The e-Chamber™ Quartz Cup can be more thoroughly cleaned by pouring 91% isopropyl alcohol halfway up into the Quartz Cup, and letting it soak for 20 to 30 minutes. Pour any remaining isopropyl alcohol out of the Quartz Cup and allow it to dry completely before use.
